

Live App Demo Details and Testing Workflow

-This is the **MULTIRESTO/MULTISTORE WEBSITE** – <http://185.121.25.122/multivendor> [Note -The demo is more multistore focussed but can be converted to multi-restaurant by simply renaming store to restaurant on website and apps]

-this is the **RESTAURANT SUB-ADMIN** <http://185.121.25.122/multivendor/merchant>
user/pass = resto/123

this is backend panel for restaurant <http://185.121.25.122/multivendor/menu-pumpkers-paradise>

-This is the **DELIVERY MANAGEMENT BACKEND** <http://185.121.25.122/multivendor/driver>
logins - demo/demo

-These are the **CUSTOMER APP** download links

Android - <https://play.google.com/store/apps/details?id=com.multiresto.customer>

iOs - <https://apps.apple.com/us/app/multiresto-customer-app/id1494083232>

For logins create new account

- These are the **VENDOR/RESTAURANT/ORDER MANAGEMENT App** download links

Android - <https://play.google.com/store/apps/details?id=com.multiresto.merchantapp>

iOS - <https://apps.apple.com/us/app/multistore-merchant-app/id1493527107>

use login user/pass = resto/123

- These are the **DRIVER APP**

Android - <https://play.google.com/store/apps/details?id=com.multiresto.driverapp>

iOS – <https://apps.apple.com/us/app/multistore-driver-app/id1570226449>

use logins user/pass = driver/driver or fed/fed

Do testing like below process so you have clarity on workflow and then you can play around with the system

-PLACE AN ORDER from restaurant/store spectra <http://185.121.25.122/multivendor/menu-pumpkers-paradise> from either website or customer app [On customer app place order from restaurant Pumpkers Paradise] - you can create new account on the website or app for placing order and use cash on delivery as payment method >>> this will help you test the customer side ordering workflow.

Note – you may not get result when you search using geolocation as no restaurant/stores maybe added in your area so either direct go to restaurant/stores in the list and look for pumpkers paradise or search for budapest city for getting demo resto Pumpkers Paradise.

-once the order is placed - you need to accept the order from the restaurant/store backend or restaurant/store app with logins resto/123

-After the order is accepted by the restaurant it will come to delivery backend as task here and from here will be auto assigned to driver in the app from where the driver can accept/reject and view route to customers location and driver can mark the delivery as completed

-Once the driver changes the status to started then customer can also do live tracking of delivery from their app on the order status page
